

Data-driven distribution decisions

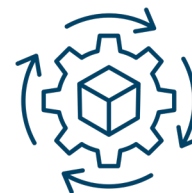

Purpose-built for distribution and supply chain organizations, Solver is a cloud-based extended financial planning and analysis (xFP&A) solution that leverages patented QuickStart integration technology to enable immediate access to ready-to-use reporting and planning templates. Unify fragmented data across warehousing, logistics, and procurement to drive visibility, efficiency, and intelligent decisions across your entire distribution network.

Key Benefits

- Break down data silos across suppliers, warehouses, carriers, and ERP/WMS/TMS systems with unified reporting
- Improve demand forecasting accuracy with AI-driven predictive analytics that reduce the bullwhip effect and optimize inventory levels
- Gain end-to-end supply chain visibility through real-time dashboards and control tower reporting
- Streamline multi-location consolidations with automated intercompany eliminations and currency translation
- Track ESG metrics and sustainability KPIs alongside financial performance to meet compliance and stakeholder expectations
- Model scenario planning for supply disruptions, transportation cost fluctuations, and demand volatility
- Accelerate decision-making with driver-based budgeting that aligns procurement, inventory, and fulfillment operations
- Analyze profitability by SKU, customer, warehouse, and distribution channel to identify margin opportunities

All-inclusive licensing for distributed operations

With Solver, every user across your distribution network gets access to the entire Solver Suite. No need to purchase additional modules or connectors. Empower warehouse managers, logistics coordinators, procurement teams, and finance professionals with the same powerful planning and reporting capabilities.

Distribution Insights

Gain end-to-end visibility through real-time dashboards

Improve demand forecasting with AI-driven analytics

Analyze profitability across SKUs, customers, and channels

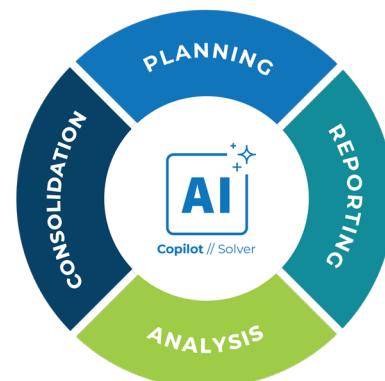

Accelerate Intelligent Decisions

Guided implementation tailored to your team

Expert-led training for power users

Smooth deployment to all users

Comprehensive support and growth plan

Effortlessly consolidate data

Unify supply chain data for end-to-end visibility

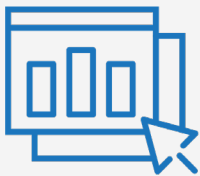

Solver is redefining the category of cloud-based reporting and planning for distribution operations and provides a user-friendly data warehouse that is built on the Microsoft SQL Azure platform. Solver takes away the complex, expensive implementation of a “homegrown” data warehouse, and instead allows users to access financial and operational data in days, versus weeks or months.

Combine GL data with inventory movements, order fulfillment metrics, transportation costs, and warehouse performance into a single solution, powered by the most flexible report and planning form designer on the market. Streamline financial and operational consolidations across multiple distribution centers, automate intercompany eliminations, and deliver real-time visibility into supply chain performance from procurement to last-mile delivery.

Drive intelligent decisions with industry-specific marketplace templates

Solver is designed to meet the unique reporting and planning needs of distribution organizations. Meet your supply chain reporting requirements on day one with ready-to-use reports, planning forms, and dashboard templates specifically built for distribution and manufacturing operations from the Solver Template Marketplace or create ad-hoc and custom reports to fit your specific operational requirements.

- **Inventory Analysis Dashboard** - Track stock levels, turnover ratios, and carrying costs across multiple warehouses
- **Logistics Cost Variance Report** - Monitor transportation spend, fuel surcharges, and carrier performance against budget
- **Procurement & Supplier Budget** - Plan purchasing across multiple suppliers with automated workflows and approval hierarchies
