

Data-driven financial planning for restaurants & hospitality

Purpose-built for restaurant and hospitality food service operators, Solver is a cloud-based extended financial planning and analysis (xFP&A) solution that leverages patented QuickStart integration technology to enable immediate access to ready-to-use reporting and planning templates. Unify fragmented data across POS, labor, inventory, and ERP systems to drive prime cost control, multi-unit visibility, and intelligent decisions across every location.

According to Restaurant365, 91% of restaurant operators reported food cost increases in 2025. At the same time, the industry continues to face an average annual employee turnover rate of roughly 80%, based on BLS data analyzed by Toast. Despite these pressures, most restaurants operate on thin profit margins of just 3–9%, according to Restaurant365 and Toast benchmarks. Compounding the challenge, the National Restaurant Association reports that food and labor costs have each risen approximately 35% over the past five years, significantly compressing margins.

Key Benefits

Operational Outcomes

- Track prime cost and contribution margin in real time across every unit and every 13-period cycle
- Model labor cost impact of wage increases, overtime, and scheduling changes before they hit the P&L
- Run same-store sales (SSS) vs. new unit build (NUB) analysis with a single click
- Forecast food costs and demand with AI-driven predictive analytics to reduce waste and over-ordering

Financial & Consolidation Benefits

- Break down data silos across POS, inventory, labor management, and ERP systems with unified reporting
- Cut reporting time by up to 50% with automated consolidations and pre-built restaurant templates
- Streamline multi-entity consolidations with automated intercompany eliminations and franchise royalty tracking
- Scale from a single unit to a 500-location franchise on one flexible, all-inclusive platform

All-inclusive licensing for restaurant operations

Built for the 10-to-100+ location group that has outgrown basic tools but doesn't need the cost or complexity of enterprise software. Every user, from the GM reviewing unit-level P&L to the CFO consolidating the portfolio, gets access to the full Solver Suite. **One platform, one price, no module fees.**

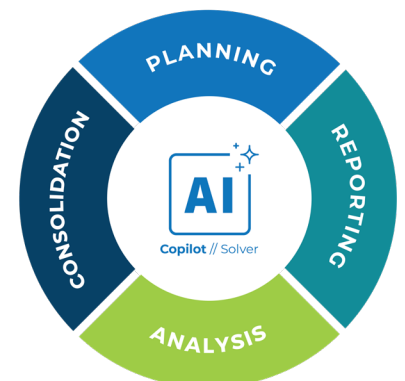

Restaurants Insights

Prime cost visibility at every unit
13-period and weekly planning SSS vs. NUB benchmarking
Menu engineering AI with Solver Copilot

Accelerate Intelligent Decisions

Guided implementation tailored to your team
Expert-led training for power users
Smooth deployment to all users
Comprehensive support and growth plan

Effortlessly consolidate restaurant data

Unify restaurant data for end-to-end operational and financial visibility

Solver is redefining cloud-based reporting and planning for restaurant and hospitality operations with a user-friendly data warehouse built on the Microsoft SQL Azure platform. Solver removes the complexity of a homegrown data warehouse and allows operators to access financial and operational data in days, not weeks or months.

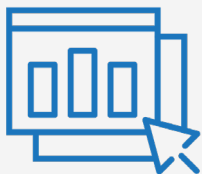

Combine GL data with POS transaction detail, labor hours, inventory movements, recipe costs, and franchise royalties into a single solution, powered by the most flexible report and planning form designer on the market. Streamline financial and operational consolidations across multiple locations, automate intercompany eliminations, and deliver real-time visibility from a single unit to a 500-location franchise system.

Drive Intelligent Decisions with Restaurant-Specific Marketplace Templates

Meet your restaurant reporting and planning requirements on day one with ready-to-use reports, planning forms, and dashboard templates built for restaurant and hospitality operations from the Solver Template Marketplace.

Template Examples:

- **Unit P&L Flash Report** - Per-location P&L, prime cost tracking, and variance analysis to identify underperforming units and drive GM-level accountability.
- **Prime Cost Variance Report** - Automated CoGS and labor variance detection by location, period, and category, enabling quick corrections that protect margins.
- **Same-Store Sales (SSS) Dashboard** - Monitor comparable sales trends, separate SSS from new unit build (NUB), and benchmark performance across the portfolio.
- **Menu Engineering Report** - Contribution margin analysis by item, category, and daypart to increase profitability without raising prices.
- **Labor Sensitivity & Scheduling Report** - Model the labor cost impact of wage increases, overtime, and scheduling changes before commitments are made.
- **New Unit Pro Forma & Capex Tracker** - Pre-opening cost tracking, ramp-up forecasting, and ROI analysis to improve new unit accuracy and accelerate payback
